

EXTRACTION CLEANING & SANITIZING

Tools Needed

- Wet Floor Sign
- Carpet Extractor
- Measuring Cup
- Carpet Rake or Stiff Brush

Product Needed

P&G Pro Line
Carpet Extraction Cleaner / Sanitizer

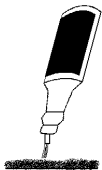

FREQUENCY OF CLEANING: When carpet looks heavily soiled. Regular bonnet cleaning will extend time between extraction cleaning.

PREPARATION: Collect all tools, equipment and products required. Ensure all equipment is operational. Review MSDS, product labels and caution statements. Choose appropriate safety equipment.

SPECIAL DIRECTIONS FOR THIS TASK: **P&G Pro Line Carpet Extraction Cleaner/ Sanitizer is an EPA registered sanitizing product. This product must be used in a manner consistent with the product label. Pre-test extraction cleaner for colorfastness before use. Do not use if color is removed, faded or otherwise changed. Extraction Cleaner/Sanitizer is recommended for use on washable synthetic fibers. Extraction Cleaner / Sanitizer is not recommended for use on wool or natural fiber carpets. Clear furnishings from area. Protect furnishings that cannot be moved. Replace furnishings when finished. Use furniture pads if furniture must be replaced before floor is dry. When finished, clean and return equipment to storage area.**

NOTE: Pre-test extraction cleaner for colorfastness before use. Do not use if color is removed, faded or otherwise changed. Extraction Cleaner/Sanitizer is not recommended for use on wool or natural fiber carpets.

STEP 1

- Pre-treat spots and remove chewing gum following the Carpet Spot Removal Procedure.
- Remove loose soil by following the Vacuum Procedure.

STEP 2

- Post "wet floor" sign in area to be cleaned.

STEP 3

- When filling carpet extractor, add 2 ounces of P&G Pro Line Carpet Extraction Cleaner/ Sanitizer per each gallon of water. Add extraction cleaner after most of the water has been added to the extractor tank, to minimize foaming.
- Optional: Add 1 ounce foam control agent to extractor vacuum recovery tank, to prevent foaming and early shut-off of extractor.

STEP 4

- Begin extracting at farthest point from exit.
 - Moving in a constant steady motion, hold feed valve open and pull extractor towards you.
 - Release the feed valve before reaching end of pass.
 - With control valve closed, push extractor forward to pick-up moisture and soils.
- NOTE: Avoid overwetting carpet.**

STEP 5

- Move to next section, working towards exit and repeat Step 4 and Step 5.

STEP 6

- Brush or rake carpet in one direction to set nap up.

STEP 7

- Apply Carpet / Upholstery Protectant following the Carpet/Upholstery Protection Procedure.

NOTE: Carpet / Upholstery Protectant may be applied while carpet is wet.

NOTE: To speed dry carpet, buff with clean dry bonnets, turning and changing often. A fan may be used. Direct air movement up across or out from room.

STEP 8

- Vacuum carpet when dry following the Vacuum Procedure.
