### Wall Rack Kit

Each kit contains:

- (4) Plastic Shelves
- (16) Plastic Posts
- (4) Plastic End Caps
- (2) Buddy Jugs
- (1) Wire Rack
- (1) Pack of Labels

### Assemble the Rack

- 1 Place a shelf on a flat surface with the smooth side facing up.
- 2 Insert one post into the top shelf socket. Push down with a slight twist until the post is properly seated. Repeat by adding 3 additional posts.

**NOTE:** If needed, add a slight amount of lubricant to help a tight fitting post.

3 Align the next shelf with both shelf "Stoppers" in the same direction. A "Stopper" will keep a Buddy Jug from falling off the shelf.

4 Apply downward pressure to each corner of the shelf to secure a tight fit of the shelf.

5 Assemble the remaining posts and shelves with the "Stopper" in the same direction until all shelves are completed.

6 Flip the rack assembly over. Install the remaining 4 posts. These post will give a 10 inch clearance between the floor and bottom shelf.

7 Stand the rack upright. Adjust any post or shelf that may be out of balance.

8 Place the (4) plastic end caps on the top shelf, one on each corner.

Apply the product label to the Buddy Jug.

### Mounting the Wire Basket

1 Tilt the wire basket to install between the posts.

2 With both side hooks leveraged on the inside posts, make sure basket is evenly balanced.
